MeterPod™ Launched

A fantastic response to the launch of MeterPod™ the revolutionary smart modem from Pilot Systems at the ESTA AM&T event in February. This self-install unit meets energy suppliers obligations for a smart meter at the fraction of the cost of replacement. The MeterPod™ in conjunction with existing digital meters brings fiscal register and half-hourly data to the customer, independently from the energy supplier if they wish, and much needed for CRC.

Getting up to five months historic data already stored in the meter on Day 1 has been a great plus.

This combined with the attractive cost compared to meter replacement, and the environmental issues associated with discarding a meter that still has many years of useful life in it have secured the future for the MeterPod™ in the UK electricity industry.

Battery power allows the unit to be installed easily without shutting the power to the site down. And use of the renowned CHIRPS™ software through GSM sets the path for a thin and uncluttered communications model into the future for smart metering.

New Chairman for ESTA MMG

Pilot Systems Managing Director, Nigel Orchard has been elected the new chairman of the ESTA Meter and Monitoring group to succeed Paul Martin from Team. "It's an honour and privilege to take on this role, and I look forward to working closer with many of the experts in the

metering business and supply industry." Orchard's main objectives in ESTA (the Energy Services and Technology Association) will be achieving a good metering and monitoring market, starting from the UK. A good working market will serve consumers, businesses, public sector bodies and governments better in reducing carbon and energy cost, and will encourage energy suppliers to become more innovative. This will in turn make full use of the resources available, particularly those from ESTA members. Orchard will be promoting business-to-business, accessible standards, full consideration for members' individual commercial positions, and smaller as well as larger players being heard at government and increasingly European level. He hopes to involve as many members to take an active part in this.

See the MeterPod™ at Sustainability Live

Pilot Systems will be demonstrating the MeterPod™ again at their Stand R5 at Nemex (Sustainability Live) at the NEC in Birmingham on 20th, 21st and 22nd April. We welcome you to share in this revolutionary technology.
